Subject Index to Volume 4

Adeno-tonsillectomy, 139
Airway suction, classical, interrupter, and occlusion, 48
Alveolar numbers, 18
Alveolar surface areas, 18
Apnea, 213
Apnea density, 78
Apnea of prematurity, 78
Atelectasis, 144
Atopy
  relationship with abdominal pain, 27
  relationship with small bowel injury, 27

Baseline, post-exercise, 197
Beta-lactamase-inducible chemical isolate, 72
Blood gases, 54
Book Reviews, 63, 129, 251
Bronchial provocation tests, 90
Brush cells, congenital origin of, 185

Causes of false-negative tests, 169
Chemotactic factors, 237
Clinical consequences, 169
Clinical efficacy, adverse reactions, 201
Collagen, elastin content, 18
Collagen synthesis inhibitor, 230
Compliance, 48
Complicating conditions, 13, 54
Computerized data analysis, 150
Computer modeling, 219
Congenital airway responsiveness, 90
Control animals, saline-injected, 18
Cor pulmonale, 139
Correspondence, 59, 128, 192
Cost savings vs. cost effectiveness, 84
Cystic fibrosis, 169

Daily (short-term), alternate day (long-term) regimen, 13
Diagnostic delay, 169
Diaphragmatic damage, pacing induced, 33
Direct, indirect, intangible benefits, 84
Drug resistant mutant, 72
Dynamic compliance, 139, 150

Early expired volume vs. end-expiratory flow, 205
Elastic recoil, 18
Electron microscopy, 185
Emphysema, 144
End-expiratory volume vs. FRC, 48
Equipment design, 219
Exercise-induced asthma, 2
  correlation with clinical severity, 2
Experimental emphysema, 18

Face chamber for delivering CPAP, 213
FEV_1-changes, 197
Flow transients, 205
Flow-volume loops, 39
Food intolerance, 27
Forced expiratory flow rates, 90
Forced oscillation technique, effects of endotracheal tubes, 39

Gamma globulin pretreatment, 13
  effect on oxygenation, 13
  roentgenographic results, 13
Gas exchange, 144

Hemorrhage, 144
High-dose piperacillin, 201
Histamine, PAF, prostaglandins, leukotrienes, 237
Histamine response, protective effect of antihistamine, 225
Home care companies, 84
Hospitalized children and adolescents, 181
Hyaline membrane disease, 213
Hydroxyproline level, 230

Immediate hypersensitivity, 237
Infants without prior respiratory disease, 90
Inflammation, 144
Inspiratory time, prolonged or shortened, 33
Intercostal muscle recruitment, 134
Interpulse intervals, prolonged, 33
Interrupter technique, 39
Isoelectric focusing, 72
IV antibodies and fluids, safety and prolonged functioning, 181

JEM 100CX transmission, 185

Lung function testing, 219
Lung growth and differentiation, 230
Lung injury score, 144
Lung mechanics, minute ventilation, 213
Lung regulatory peptides, 237
Lung volume-pressure curves, 18

Mechanisms of stimuli, 225
Mediator interaction, 237
Medical records review, 169
Microvilli on type II cells, 185
Mycobacterium avium infection, 13

Neonatal vs. infantile age groups, 134

Oral β_2 agonists, 197
Oropharyngeal obstruction, 139

Pacing, awake or asleep, 33
Paradoxical ribcage movement, 134
Passive vs. forced-flow characteristics, 48
Peak airway pressure, 39
Perspectives, 71, 133
Pneumogram recordings, 78
Pneumonitis, 185
Postconceptional age, 78
Prenatal glucocorticoid, 230
Pressure-volume curves for tidal volume, 150
Preventive administration, 90 and 30 min pre-exercise, 197
Protection, lack of, against cold air challenge, 225
Provoking concentration for 30% drop in VmaxFRC, 164
Pulmonary disease course, correlation with antibacterial susceptibility pattern, 159
Pulse-oximetry, 164

Radionuclide ventriculography, 139
Resistance, 48
  to piperacillin, 201
Respiratory muscle strength, 8
Retrospective analysis, 159
Ribcage deformity, 8
Ribcage to abdominal movement ratio, 134

Safety and pharmacokinetics, 201
Saline or air-filled volume-pressure curves, 18
Selected Abstracts, 64, 193, 252
Sensitivity, specificity of provocations, 2
Shwachtman syndrome, 54
Single compartment linear mechanical system model, 150
Sleep states, effect of, 134
Source of acquisition, 159
Special CPAP instrument arrangement, 54
Sputum and throat cultures, 159

Squeeze jacket techniques, 48
Stimulus frequency, lowered, 33
Sweat test, 169

Therapeutic recommendations, 205
Thoracic compression technique, 90
Time constant, 48
Total pulmonary resistance, 150
Tracheobronchomalacia, 54
Transcutaneous blood gases, 213
Transcutaneous P_{O_2} and P_{CO_2}, 164
Treadmill running, 197

Upper airway , 219
  obstruction, 139

Ventilation perfusion mismatching, 164
Very low birthweight infants, 78
Volume of airway contribution, 205

Work of breathing, 150
